Powder

Potassium Citrate,
Sodium Citrate, &
Vitamins
Form the Frontline
Defense for
Poultry Immunity.

MAK Gumbonil

Powder

میک گمبونل
پاؤڈر

COMPOSITION:

Each gram contains

Potassium Citrate.....	180 mg
Sodium Citrate.....	120 mg
Vitamin B1.....	0.3 mg
Vitamin B2.....	0.15 mg
Nicotinamide.....	3.2 mg
Vitamin K3.....	1.15mg
Vitamin C.....	11.0 mg
(As per innovator's specifications)	

Protect from
(IBD) Infectious
Bursal Disease/
Gumboro.

Role of Potassium and Sodium Citrate

Potassium and Sodium citrate are used in veterinary medicine as urinary alkalinizing agents to help prevent the formation of urinary stones in poultry. They work by increasing the pH of urine, making it less acidic and reducing the risk of crystal formation. Additionally, these citrates can aid in the treatment of certain metabolic conditions such as metabolic acidosis. Their use should be under veterinary supervision to ensure proper dosing and monitoring of the animal's condition.

Role of Vitamins

Vitamins B1, B2, and B3 are essential for poultry metabolism, energy production, and overall health. Thiamine aids carbohydrate metabolism, riboflavin supports energy production, and niacin contributes to cellular functions. Deficiencies can lead to growth issues, poor feathering, and decreased egg production. Balanced diets with adequate B vitamins are crucial for optimal energy utilization. Additionally, vitamin C is beneficial in extreme weather conditions, strengthening eggshells, improving egg production, and acting as an antioxidant to enhance immune function. Vitamin K3 regulates blood clotting and bone metabolism, ensuring proper growth and health in birds.

Indication:

Mak Gumbonil is used for poultry management, serving as a solution to overcome heat stress, acts as an immunomodulator, supports the initial days of chicks, provides supportive treatment after vaccine, and contributes to enhancing hatchability.

Dosage:

2 gm per 1 liter
of drinking water.

Administration:

Mix the prescribed amount of **Mak Gumbonil** Powder thoroughly with the poultry feed or dissolve it in drinking water to ensure complete consumption by the birds.

Supportive Care:

Provide adequate nutrition and hydration to the affected poultry. Monitor for any signs of improvement or worsening of symptoms during the treatment period.

Preventive Measures:

Vaccinate other susceptible poultry against Gumboro disease to prevent future outbreaks. Ensure proper biosecurity measures to minimize the spread of the virus among flocks. Always follow veterinary guidelines and consult with a veterinarian for accurate diagnosis and treatment recommendations.

میک گمبونل
پاؤڈر

میک گمبونل پاؤڈر مرغیوں میں گمبورو وائرس کے خلاف مؤثر تحفظ فراہم کرتا ہے۔ میک گمبونل پاؤڈر وٹامنز اور نمکیات کا مفید مرکب ہے جو مرغیوں میں مینا بولزم، توانائی کی پیداوار، مناسب نشوونما اور صحت کو یقینی بناتا ہے اور مدافعتی افعال کو بڑھانے کے لیے اینٹی اوکسیڈینٹ کے طور پر کام کرتا ہے۔ میک گمبونل پاؤڈر مرغیوں میں قوت مدافعت کو بڑھانے کے لیے انتہائی مؤثر ہے۔ میک گمبونل پاؤڈر مرغیوں میں چوچ کھانے کے دوران گرمی کے دباؤ پر قابو پانے کے لیے استعمال کیا جاتا ہے۔ یہ ایک امیونوموڈولیٹر کے طور پر کام کرتا ہے، ابتدائی دنوں میں، ویکسینیشن کے دوران معاون علاج فراہم کرتا ہے۔ کھانگ اور نقل و حمل کے دوران مدد کرتا ہے۔ میک گمبونل پاؤڈر مرغیوں میں گمبورو کی وجہ سے بڑے پیمانے پر ہونے والی اموات سے بچاتا ہے۔
